Dear Chawntay,

I am quite eager to apply for the Full-Stack Software Developer position at Apex Hosting, LLC. As a veteran of gaming industry leader Zynga and several other start-up gaming studios, and a lover of Minecraft, I'm excited to apply to such an important game service company.

I recently graduated top of my class from Fullstack Academy with proficency in langauges and tech like JavaScript, TypeScript, SQL, Node.js, Express.js and React. I am continuing to expand my programming expertise by learning langauges like LaTex, PHP and Flutter/Dart, and by experimenting with tech like Laravel, Docker and MySQL.

To give you an idea of my work as an engineer, I invite you to play my latest game, Alley Cat, which you can find here: cherry-stone-studios.onrender.com. Allow the game to load for a moment, and then enjoy! I hope it will demonstrate my ability to work with a team to produce a vanilla JavaScript game in a short amount of time. My contributions can be found in our repository on my GitHub, which I configured to allow for continuous integration as part of my rigorous testing regimen.

I believe my insight into gaming communities combined with my skills as a fullstack engineer makes me uniquely suited to become a part of your team. Thank you for considering my application for the Full-Stack Software Engineer position. I look forward to speaking with you further over how my experience can benefit Apex Hosting, LLC.

Best,

Hannah Johnson
